

## PBR RELEASE INSTRUCTIONS

Weldon Planer Boards and Releases can be trolled from any size boat with equal effectiveness. They can be used with both monofilament or wire line.

The illustrations at left show how to place the fishing line in the PBR-1 Pad Release. The mono line is easily looped and placed in the jaws to a depth compatible with the lure and line weight (1/4" approx.). Wire fishing line must not be kinked, so it is laid in the jaws in a gentle curve.

The planer boards allow lures to be positioned away from the boat. As the boat moves through the water fish are herded towards the lures. Hooked fish release lines from their clips and are retrieved behind the boat.

This method of fishing is deadly and will become and will become an excellent producer in no time at all!
